

RealDecibelMeter.com — SEO, Site Structure & UI Brief

Generated 23 Sep 2026 · Source: repo build, docs/seo-report.md, SEO-QA, KEYWORD-MAP, Layout/seo.ts, UI-QA · Scope: local build (no deploy)

1 — Site overview

Static **Astro 7** site (**output: static**, Tailwind v4), single canonical origin **https://realdecibelmeter.com** with **trailingSlash: always**. Latest local audit: **52 HTML files / 50 indexable routes**, build + typecheck + **147–311 Vitest tests PASS**, 0 hard SEO issues. All audio runs client-side via Web Audio API; nothing is uploaded. Analytics (GA4 G-RRH0RDHC09) loads deferred after page load.

Locales (8): en (/), de, ja (full guide clusters) + it, es, fr, pt, ko (homepage-only). **EN**: 28 pages · **DE**: 7 · **JA**: 10 · **IT/ES/FR/PT/KO**: 1 each. **Contact**: hello@realdecibelmeter.com. No decibelmeter.bond links/canonicals anywhere on the site (guarded by tests).

2 — Site structure

Group	Routes
Tool homepages (8)	/, /de/, /ja/, /it/, /es/, /fr/, /pt/, /ko/ — each with live meter + localized copy, FAQ, guides entry
EN guides (9)	/guides/ (hub), /how-to-use/, /methodology/, /calibration/, /accuracy/, /decibel-chart/, /db-vs-dba/, /microphone-not-working/, /privacy/
DE guides (6)	/de/anleitungen/, /de/kalibrierung/, /de/genauigkeit/, /de/dezibel-tabelle/, /de/db-vs-dba/, /de/mikrofon-funktioniert-nicht/
JA guides (9)	/ja/guides/, /ja/how-to-use/, /ja/methodology/, /ja/calibration/, /ja/accuracy/, /ja/decibel-chart/, /ja/db-vs-dba/, /ja/microphone-not-working/, /ja/privacy/
Tool pages (8)	/tone-generator/, /speaker-test/, /hearing-age-test/, /noise-exposure-calculator/, /frequency-analyzer/, /background-noise-test/, /microphone-noise-floor-test/, /dbfs-vs-db-spl/ (+ /validation/, /phone-decibel-meter/, /sound-level-meter/, /noise-exposure/)
Trust / legal (6)	/about/, /contact/, /faq/, /privacy/, /terms/, /disclaimer/, /editorial-policy/
Errors (2)	/404.html, /500.html — noindex, recovery links, excluded from sitemap

Navigation: 64px sticky header (brand, Guides, language switcher, theme toggle, mobile menu) → hero → meter → stats/graph → steps/accuracy/troubleshooting → FAQ → guides → footer. Guide language switcher links only to existing equivalents (no broken links); every indexable page reachable from nav/footer/hub/switcher.

3 — SEO work completed

Technical foundations (all PASS in audit)

Self-referencing absolute **canonicals** from one Layout component; single HTTPS origin; no HTTP/localhost/preview URLs.

Reciprocal **hreflang** homepage cluster (en,de,it,ja,es,fr,pt,ko + x-default→EN); guide clusters en/de/ja; correct **<html lang>** per route; og:locale per page.

Sitemap (sitemap-index → sitemap-0.xml, 50 production URLs, build-date lastmod, crawl-budget priorities 1.0→0.4, no 404/500) + **robots.txt** (Allow: / + sitemap pointer).

Exactly **1 H1 + unique title/description** per indexable page; robots **index,follow** (404/500: **noindex,follow**); 0 broken internal links; 0 orphans.

OG/Twitter (title, description, url, 1200×630 og-image, image alt, summary_large_image) + **theme-color**, favicon.svg, skip link.

JSON-LD (validated by parse tests): WebSite+WebApplication on tool pages, FAQPage, BreadcrumbList, Article on guides; schema mirrors visible copy.

Content / keyword discipline

One primary intent per URL (**KEYWORD-MAP**); EN meter cluster only on /; DE/JA single-intent pages; no doorway/spelling-variant pages; synonyms covered inline.

Homepage H1s are keywords in all 8 languages (not marketing copy); guides expanded (accuracy limits, calibration workflow, chart marked approximate, methodology with CDC/NIOSH + MDN/W3C refs).

No accuracy/compliance claims (no 100%/lab-grade/certified language); no safety verdicts; trust pages (about, methodology, editorial-policy, disclaimer) support E-E-A-T.

Ink-on-white inline-SVG graphics only (no alt gaps); key content server-rendered so H1/intro/steps/FAQ are in HTML (meter needs mic by design).

Guardrails: **seo.test.ts** + **site-audit.mjs** assert canonicals, hreflang, titles, JSON-LD, no .bond/localhost, no orphan/broken links on every run.

4 — UI / UX

Theme & system: dark default, light mode, localStorage persist, no-flash inline head script; near-black ink on near-white canvas, hairline cards (12–16px radius), Geist-like tight-tracked display type; gradient confined to hero glow + graph stroke.

MeterPanel: Start/Pause/Resume/Stop/Reset (mutually exclusive per state), mic selector, 24-seg LED bar + 10-band live FFT spectrum, stats (Current/Avg/Peak/Strength), calibration modal (Calibrate/Digital/Relative/Mic/A-C-Z/Fast-Slow), CSV/JSON export, 20-entry history; idle shows “—” + “Calibration required” (no fake data).

Responsive: verified 320×800 / 390×844 / 768×1024 / 1440×900, dark+light: no horizontal overflow, hero+meter in first viewport, grids collapse to 1-up, ≥44px targets.

Accessibility & motion: skip link, focus-visible rings, trapped-focus modal, aria-labelled SVG, tabular numerals; motion ≤220ms (+2 slow 2.4s ambient pulses), fully disabled under prefers-reduced-motion.

Performance: static HTML, deferred analytics, single rAF loop, mic stream disposed on Stop; no heavy raster imagery.

5 — Status & next steps

Cosmetic only: 9 titles exceed 60 chars and may truncate in SERPs (accuracy, calibration, dbfs-vs-db-spl, frequency-analyzer, noise-exposure, speaker-test, validation, etc.) — optional shorten.

Known limitation: runtime calibration-modal/diagnostics strings are English-first on non-EN locales; crawlable landing copy is fully localized. Full app-chrome i18n is a follow-up (no DSP changes).

Next: connect DNS/production hosting over HTTPS, submit sitemap-index to Search Console, request indexing for /, /ja/ + core guides, then track impressions/clicks per the 90-day plan. No deploy or .bond migration involved.
